## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 2\_Q5

Attempt : 1

Total Mark : 10

Marks Obtained : 10

### Section 1 : Coding

#### 1. Problem Statement

Ted, the computer science enthusiast, has accepted the challenge of writing a program that checks if the number of digits in an integer matches the sum of its digits.

Guide Ted in designing and writing the code to solve this problem using a 'do-while' loop.

#### ***Input Format***

The input consists of an integer N, representing the number to be checked.

#### ***Output Format***

If the sum is equal to the number of digits, print "The number of digits in N matches the sum of its digits."

Else, print "The number of digits in N does not match the sum of its digits."

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: 20

Output: The number of digits in 20 matches the sum of its digits.

### **Answer**

```
// You are using Java
import java.util.Scanner;
public class Main{
    public static void main(String[] args){
        Scanner d=new Scanner(System.in);
        int n=d.nextInt();
        int z=n;
        int a=0;
        int c=0;
        do{
            c+=n%10;
            n/=10;
            a=a+1;
        }while(n!=0);
        if(c==a){
            System.out.printf("The number of digits in %d matches the sum of its
digits.",z);
        }
        else if(c!=a){
            System.out.printf("The number of digits in %d does not match the sum of
its digits.",z);
        }
        else{
            System.out.printf("");
        }
    }
}
```

**Status : Correct**

**Marks : 10/10**
